10 Hectare

PHASE 2

BLOCK YARD

ESTABLISHMENT

Following the successful land preparation in Phase 1, Phase 2 marks a critical step in the realisation of our 10-hectare development: the establishment of our on-site Block Yard.

This facility will serve as the production hub for high-quality building blocks required throughout the construction of the project. By manufacturing materials on-site, we aim to ensure consistent quality, reduce construction costs, and accelerate building timelines across all planned infrastructure, including the School, Church, and community facilities.

The block yard will function on a contractual basis, creating employment opportunities while also fostering skills development within the local community. In addition to supporting internal construction, the facility has the potential to supply surplus materials to surrounding developments, contributing to long-term sustainability and revenue generation.

Phase 2 is not only about infrastructure—it's about laying a strong, self-sufficient foundation for growth, empowerment, and excellence. This step brings us closer to building a thriving, impactful environment that will serve generations to come.
